Dynalube Corp.

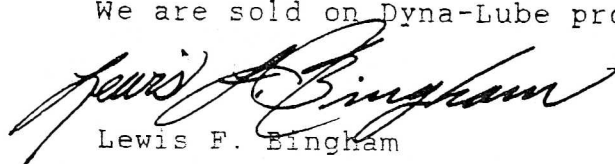

To Whom it May Concern;

Bill Davidson runs the grinding department at Bimco. In our Grinding Department we have a Norton O.D. Grinder. As of late, it has been running very rough. As soon as he turned off the machine it would slow down very rapidly and come to a screeching halt.

I had Bill put some Dyna-Lube oil treatment in with the oil. The machine now runs much more freely. Now when we turn the grinder off it coasts smoothly to a stop and sounds much better.

The sample part that we gave you has two samples of grinding, both before we added the Dynalube and after we added it. You can see and feel the difference in the finish. Our Quality Inspector, Randy Winder, used a Profilometer (finish tester) on the surfaces and found a 30% better finish with the part that was ground after we added the Dyna-Lube.

We are sold on Dyna-Lube products.
