To: Whom it may concern

I am writing this letter to let you know about my experience with Dyna-Lube. I have used Dyna-Lube for a year and a half, I use it primarily in my 1993 Kenworth. My semi now has over 953,000 miles of service to it's credit, with more than 250,000 miles while using Dyna-Lube. My motivation in trying Dyna-Lube was to see if I could get the semi paid for before rebuilding the motor, I am now at that point and every month I go is thousands of dollars to my bottom line.

I was introduced to this product by Mark Sumsion, while in the shop for routine maintenance, Mark asked if I would be interested in a product that would extend the life of my semi. Mark said he could give me a demonstration of how Dyna-Lube was better than any product I wish to compare it with, of course I said I would like to see it. Mark brought over his machine so I could test it my self, without outside influence. The test that I administered was amazing, I tried it against every product that I was using, it did not matter if it was synthetic or a petroleum. The machine is a bearing stall device using a counter weight, when testing I could stall it with five or six counter weights while using my products, when adding just a small amount of Dyna-Lube I could put two and three times the weight. I use Dyna-Lube in all of my differentials, transmission, hubs and all lube points. I expect to go well over a million miles before rebuilding my motor. I take oil samples every other change and the results are excellent.

I would recommend Dyna-Lube to anyone, it is the best lube on the market, you may find more uses for it than I do and I use it in every thing.

Sincerely,

Eric Graham
